Steven Koniaev

Objective:

I am looking for new creative projects that will allow me to further my passion and career in technology and programming.

Projects:

01/2021-04/2022

Ubisoft Game labs Competition 2022
Worked with a team of programmers, artists, and mentors from Ubisoft to deliver a functional game demo within 10 weeks set to a certain theme. Through the Unity engine, we created a 2 player, online multiplayer game using steam's API, called "DuebyDaylight". Allowed for development of leadership qualities in a programming environment.

09/2020-06/2021

Game Development – 2D Platformer
I have created my own projects and demos in Unity. The most notable of these is a full 2D platformer game. This involved the development of different algorithms for things like enemy AI, player movement, player combat, etc.

09/2021-Present

Website Development – Portfolio Website
I have creatively applied my knowledge of Html, CSS and JavaScript, to create websites for myself, as well as friends. I have also created full stacked websites through the use of Angular.

01/2021-04/2022

Computer Science Course Projects
Over the course of my programming course, I was able to apply concepts I learned about data structures and algorithms to complete several projects in the class such as a collision simulation, chess, pathfinding algorithm, and school system database.

Education:

09/2021-Present

Honours Computer Science,
Mcgill University

Skills:

Programming Languages and Tools:	C, C#, C++, Java, Python, Html, CSS, JavaScript, Unity, Unreal Engine, Angular, Steam API
Languages:	English, French (intermediate)

Awards & Tutoring:

2021	Graduation Highschool Computer Science Award
2022	4.0 GPA at Mcgill University
2020	Participated In Math Tutoring in my Highschool
